

PRODUCT UPDATE: Changes to Color coding, Die packages and Accusizer labels.

To improve ease of use, the following changes have been made:

- The color coding of Huth segment sets has changed to correlate with HUTH bending dies.
 - Segments are also now painted on the face in order that they can be identified when installed on the arbors.
 - The chart below shows the previous 'OLD' color vs. the 'NEW' color.

Segment Set	Colors		Arbor/Tip	
	OLD	NEW	OLD	NEW
472/473	Yellow	Red	508 & 498	572
474	Red	White	508 & 499	573
475	Black	Green		
476	Green	Gold		
477	N/A	Silver		
478	N/A	Black		

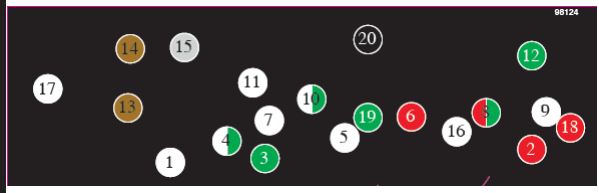

2. The 473 segment set has been replaced in die packages with the 472 segment set to improve durability. The difference between the two is that the O-ring grooves are all on the base of the 472. This increases the strength of the segment finger.

3. 2 piece arbors (508+ tips 498,499) have been replaced in die packages with 1 piece arbors (572 & 573). This change is made due to the increased use of stainless steel and other harder, thicker materials.

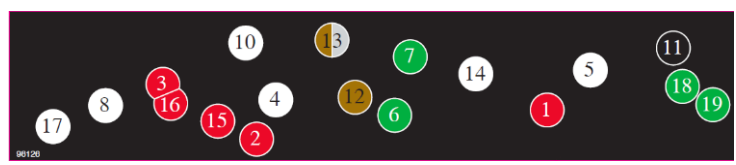

4. The Accusizer sizing and calibration decals have been upgraded to include metric dimensions. These new decals have changed from a white background to a black background.
