RE: Huth Ben Pearson International Announces Introduction of New Punch and Dimple Die Arbor Kit for Sheet Metal

Metal Fabricating equipment maker Huth Ben Pearson International is introducing a new tooling kit that allows metal fabricators to use common punch & dimple dies with Huth's hand-held expander (the Mitey Mate Jr #1685S) to become a powerful sheet metal punch.

Punch and dimple die tooling is common in metal fabrication shops. It is used to make holes in sheet metal, or to add strength-enhancing dimples to sheet metal structures. Says company president Ken Murray, "Often this is a fatiguing, unpowered hand operation. Now punching and dimpling can be done quickly and powerfully, powered by shop air. It really makes sheet metal holes & dimples easy."

The Punch and Dimple Die Arbor Kit (#H9000) comes with a 7/16" arbor (#492), a 3/4" arbor (#493) a spacer flange and a jam nut. Murray explains, "The Mitey Mate Jr. hand-held expander is already an extremely handy tool for expanding and end forming tubing. It comes with 1 1/2" to 3" expander tooling and a 2 piece expander arbor. The new arbor kit makes the Mitey Mate a handy tool for working sheet metal as well!"

Huth Ben Pearson International LLC has been the leading manufacturer of compression pipe benders and end forming equipment around the world for over 60 years. With its equipment and tooling designed and manufactured in Hartford, Wisconsin, the company goes to market under both the Huth and Ben Pearson brand names. Please call Jeanette Clayton at 800-558-7808, or visit [huthbenders.com](http://huthbenders.com), for more information.
