RE: Huth Ben Pearson International Announces Introduction of New “Dead Stop” Swaging Positioning System

Huth Ben Pearson International announced today that they are introducing a new end-forming positioning system as an accessory to their machinery. The new Dead Stop makes swaging (expanding, reducing, shaping) repeated tube and pipe-based parts quicker and easier than ever.

Company president Ken Murray explains, “Using it is easy. An operator simply attaches it to the back end of the swage box on a Huth bender or 1673 expander-reducer machine. Then they set the stop location with the positioning pins, and use the adjustable screw thread to fine tune their set up. It stays in that position for all their parts, making the repeated operation quick and easy. And it also reduces collet marks!”

The new Dead stop can be purchased with a Huth pipe bender or model 1673 expander reducer, or purchased to use with their existing Huth bender or swager.

Huth Ben Pearson International LLC has been the leading manufacturer of compression pipe benders and end forming equipment around the world for over 60 years. With its equipment and tooling designed and manufactured in Hartford, Wisconsin, the company goes to market under both the Huth and Ben Pearson brand names. Please call Jeanette Clayton at 800-558-7808, or visit huthbenders.com, for more information.
